

How To Submit Player Lineups Online

Important: Update the Scoring App to v3.17 (or higher)

1. Log In To Your DC Account *

Scan QR Code or Go To:
my.DartConnect.com

Scan To Go To MyDC

Find the scheduled match on your Dashboard and select **“Set Lineup”**

This button can also be found on the league’s schedule on DCTV. (login required)

* Requires a FREE DartConnect Account

2. Assign Players & Submit

Select players for each set in the match.

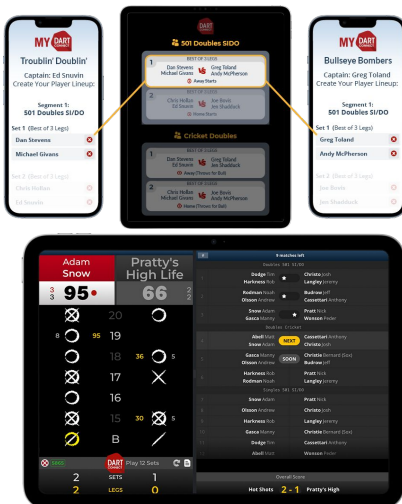

Select **“Player Not Available”** for absent players when you are unable to field a full team.

When lineup is complete, click:

3. What Happens Next?

- Your team will receive an email with the player lineup
- Scoring app will display selected players for each set
- DCTV will display the Match Lineup next to the DCTV scoreboard
- Note: If required, a player lineup can STILL be submitted or edited in the scoring app itself

FAQ: Frequently Asked Questions

When should I create the player lineup?

It can be created at ANY TIME before the match. However, it is not uploaded to the scoring app until the “**Submit**” button is selected. Just visit my.dartconnect.com and select “**Set Lineup**” for the appropriate match.

PRO TIP! Player selections will be saved automatically. You can close the lineup on one device and continue later from the same or a different device to submit before the match begins.

When can the other team see my player lineup?

The other team CANNOT see your player lineup until **BOTH** teams have submitted their respective team lineup.

What if one team does not/cannot submit their player lineup online?

You should still submit your lineup online, to save trips to the scoring app. The team that did not submit their lineup online will be required to manually select players for each set. Leagues recommend posting a paper lineup next to the tablet if a team cannot submit one online.

What if I need to make changes after the lineup has been submitted?

Once the SUBMIT button has been selected, captains cannot make changes to lineup online. HOWEVER, player lineup edits can still be made in the scoring app itself before each competition. When the app prompts the scorekeeper to confirm the player lineup before a set, select the option to change the player(s). The change will be noted in the match report and league will be notified of the substitution.

Does the scoring app require WiFi to receive the player lineup?

As you may know, the scoring app does NOT require WiFi to process a match. However, to receive an online player lineup, the tablet MUST BE connected. Once the player lineup(s) have been received by the tablet, the match can continue offline.

What if teams are shorthanded?

When a captain does not have enough players to field a full match, they can insert a “**Player Not Available**” placeholder into the lineup. If an eligible player becomes available, they can be manually selected in the scoring app during the match. For leagues that do a random draw, each team will submit the same # of players for the draw and may assign players manually during the match for remaining sets if allowed by league rules.
